

DUS.

DUS: *Champagne & Wine*, 2016.

- Set of 6 glasses, 3D print, re-cycled plastic, in unique forms and colours
- price: 100,- (inc 6% btw)

Champagne & Wine. For the festive launch of Cityscapes Foundation we present a set of luscious champagne- and wine glasses that DUS produced for Cityscapes Gallery. The glasses are 3D printed with re-cycled plastic and come in many different forms and colors. Each set of 6 glasses is unique. You can choose a set of wine glasses (see image above) or the long and narrow champagne glasses (or a mixture of both).

DUS. is an international team of designers, architects, software programmers, 3D print experts and inventors based in Amsterdam. DUS designs unique, social architecture, by focusing on technological innovation, bespoke design, and communities. They work on all scales, from the design of a glass we drink from to the neighborhoods we live in, and are state of the art experts and innovators in the field of (large scale) 3D printing. In the DUS workshop in Amsterdam North they operate a home build XXL 3D printer, with which they experiment with constructing 3D printed housing. On a building plot in Amsterdam North will arise world's first 3D printed Canal-House, a 4 storey house, consisting of 12 different 'rooms' that are each produced in one piece by the DUS XXL 3D Printer.
